Work with the low-emission 3-layer board of the new generation

Improved tongue and groove chamfer for trouble-free further processing

Solid timber panels or esb panel? Now you get the best of both worlds.

Ideal for exhibition stand construction, shopfitting and cabinetry.

Excellent technical properties, a first-class appearance and outstanding emission values make e-vita the first choice for exhibition stand construction, shopfitting and furniture makers, e-vita combines the benefits of two award-winning products from elka Holzwerke: the esb timber-based panel (elka strong board) and the VITA natural timber panel. See for yourself and order your test delivery today.

Sample for e-vita plate with tongue and groove.

e-vita can do more:

Advantages compared to conventional solid timber panels:

- Good dimensional and form stability
- Edges look sharper
- Improved middle layer board
- Stable, true-to-size tongue and groove
- Excellent elastomechanical properties

e-vita application:

- High-quality cabinetry and interior construction
 - All kinds of panelling, renovations
 - Office and business equipment
 - Shop and exhibition fitting
 - Digital printing and surface finishing
 - Packaging materials
 - Roof and sub-roof panelling
 - Wide range of applications in the non-structural field
- Ideal for industrial production and for carpenters, joiners, DIY enthusiasts

e-vita facts:

- 3-layer solid timber panel, 19 mm
- Spruce top layers: 5 mm
- esb Plus middle layer: 9 mm
- Quality: AB/B or B/C
- Format: 505×205 cm (special cuts possible)
- Bulk density: approx. 570 kg/m³
- Spruce from forests that are operated in an environmentally sustainable manner
- Extremely low in emissions
- Improved groove, tongue and chamfer quality
